

Cryo Facials For Improved Skin

Your skin is subjected to daily environmental elements such as pollution and UV exposure that can take a toll on your skin, leaving skin cells damaged and dull. Inflammation damage from those environmental factors and other skin conditions can deteriorate skin cells increasing the signs of aging or discoloration.

But the damage to your skin does not have to stay there and be permanent. Cryo facial therapy is an innovative way to get rid of environmental marks on your facial skin. The procedure is fast, effective, inexpensive, and leaves your skin glowing and with a youthful appearance.

What is a Cryo Facial?

Cryotherapy has been a way to relieve physical and mental stress and has given clients outstanding results. A newer form of this procedure is to have it done on your face. Just like cryotherapy helps with the rehabilitation of muscles and helps increase circulation, a cryo facial will expose your face to cold temperatures that will help stimulate blood flow through your skin, providing a fantastic wellness sensation.

During a cryotherapy facial, a machine helps pump cool air unto the face – forehead, cheeks, nose, and chin. The session usually takes around 12 minutes; time in which the controlled low temperature is working wonders on the texture and appearance of your skin.

As a result, clients get brighter skin, and, many times, age spots are noticeably reduced. Due to the cold temperatures, pores get tighter, giving your facial skin a much smoother appearance. Also, cold temperatures stimulate the production of collagen.

Benefits of Cryo Facials

- Anti-Aging & Skin Rejuvenation
- Improve Collagen Production
- Reduce Acne & Skin Blemishes
- Refine Skin Appearance
- More Plump Lips
- Anti-Inflammatory Properties
- Enhances Skin Exfoliation
- Strengthens the Skin
